CLARIFICATION

Sub: Billing of LT Medium Industrial consumers whose
Maximum Demand increases to more than 50 KVA
Switching over to HT supply.

As per provisions of Tariff in case the recorded Maximum Demand of any consumer under MIP category in any month is more than 50 KVA, the consumer is compulsorily required to take supply on HT voltage within one month by installing his own transformer and stipulating his Contract Demand. As an alternative for providing own transformer, the consumer can also opt for taking Nigam's distribution transformer on rent.

It has been brought to notice that in such cases there is some confusion in the field with regard to billing procedure to be adopted in the intervening period till the consumer does not stipulate the Contract Demand. Therefore, the following clarification is issued for dealing with such cases:

- 1- During the period such a consumer has not stipulated his Contract Demand i.e. in the intervening period, the billing authority should consider the 'billing demand' as the Maximum Demand recorded in the first month when demand has exceeded 50 KVA.
- 2- In such cases, the Contract Demand of the consumer would be billing demand as per Item(1) above \times 0.75.
- 3- The Contract Demand of the consumer as worked out above shall remain valid till the consumer stipulates his Contract Demand and billing demand for the intervening period for the purpose of billing is to be assessed by the billing authority in terms of Clause-10 of Sec-(3) of Preamble of "Tariff for Supply of Electricity-2001" i.e. the billing demand would be Maximum Demand actually recorded during the month or 75% of the Contract Demand whichever is higher.

(((2)))

Illustration:

There is an MIP consumer having 120 HP sanctioned connected load and the voltage of supply is LT. The Maximum Demand of consumer was observed as 55KVA in the month of July. The Maximum Demand was recorded as 45 KVA & 60 KVA in August & Sept respectively. The consumer had stipulated the Contract Demand in the month of October.

In such a case, the period the Contract Demand of the consumer as per above methodology would be $55/0.75 = 73.3$ KVA for July, Aug & Sept. In case the Maximum Demand recorded is more than 55KVA as in the month of Sept, the Maximum Demand recorded for this month would be the billing demand. On this basis, the billing demand for July would be 55 KVA. In August, it would be 55 KVA.

The above procedure may be followed by the billing agencies for billing of MIP consumers as well as for consumers under Bulk Supply for Mixed Load (Schedule ML/LT-7)-
