1.4 List of 11 kV block feeders: The detailed list of 11 kV block feeders shall be provided by concern AEN(P&EA).

1.5 Brief Scope of Work

There are about 1000 outdoor VCB kiosks (12 kV) installed at 11 kV block feeders in JPDC circle under JVVNL at about 250 different substations. These feeders are supplying single phase power in normal hours and three phase power during block hours so that agricultural motors could run during such block hours for irrigation purpose.

The VCBs, presently installed, are provided with relays that work on the principle of Neutral Voltage Displacement. In the event of conductor snap during single phasing, the voltage fluctuates and that is being sensed by the relays and it gets actuated. However, it was observed that many times the relay fails to sense the voltage fluctuations and resultantly it doesn't perform the function which is supposedly to be performed by the relay. The malfunctioning of relays cost invaluable life of many.

Therefore JVVNL decided to replace the existing relays of VCBs with upgraded relays having additional features of HIF, to enhance overall sensitivity. The HIF relays work on the principle of change in harmonics during the fault conditions. The change in frequency is sensed by relays and it gets actuated.

The supplier shall supply and retrofit the HIF relays in the VCB by replacing the existing relays in the 11 kV block feeders at different substations within the timeline as may be specified in this bidding document.
